SwiftLog Logistics — Executive Summary

Supply chain intelligence review · orders 1 Jan – 8 Sep 2026 · AnalystLab Africa Consulting

Confirmed order value	Delivered orders	Shipments delayed (3+ days)	Orders with a return
14.44M	**33.2%**	**63.7%**	**9.5%**

What we found

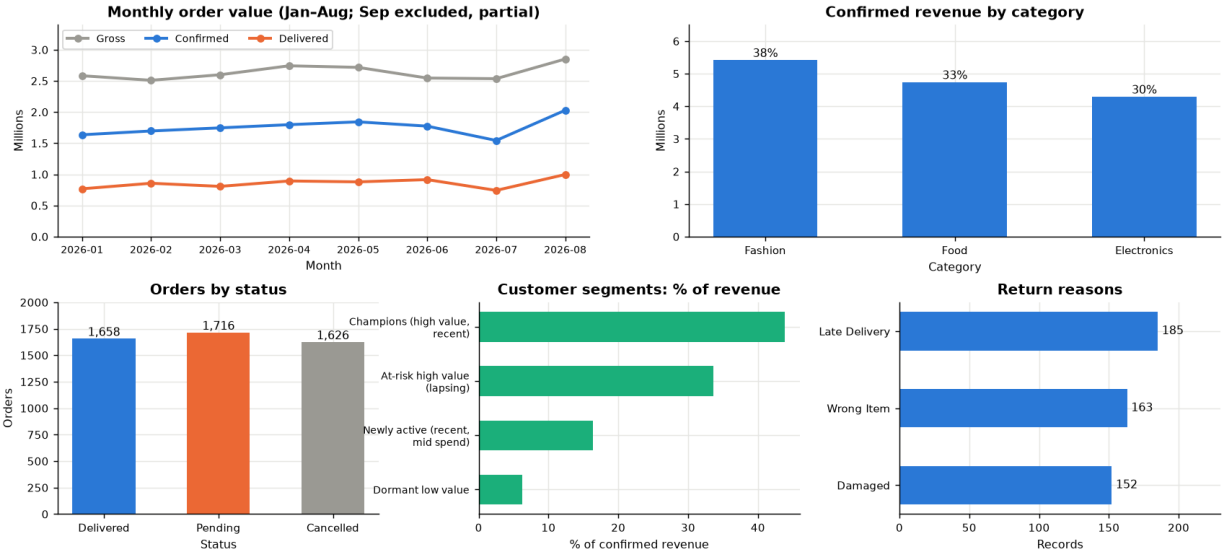

- Only one order in three is delivered. 33% are cancelled (7.23M of value) and 34% are pending. Closing this gap is a bigger prize than winning new demand.
- Late delivery is the norm, not the exception: 64% of shipments arrive 3 or more days late. No warehouse, city, product or order type is reliably worse, so the cause is network-wide.
- Records disagree with each other: 1,626 shipments are logged against cancelled orders, so delivery KPIs need reconciling before they are trusted.
- Revenue is flat and evenly spread. The top 20% of customers give 41% of revenue; a third of revenue sits with high-value customers who have not ordered for about 86 days.
- Staffing is uneven: shipments per employee range from 20 to 38 across warehouses, and low stock is concentrated in W14, W06, W13 and W15.
- Supplier performance cannot be measured: no table links suppliers to products or shipments.
- Predicting delays is not possible with today's data (best AUC 0.52, chance is 0.50).

What we recommend

- Reconcile order status with shipment and return events (high priority).
- Launch a network-wide on-time delivery programme covering carrier SLAs, dispatch cut-offs and promise dates.
- Run a funnel review of cancelled and pending orders; recovering 10% of cancelled value is worth about 0.72M.
- Rebalance staff toward W14, W15 and W12 and replenish stock at the low-stock hotspots.
- Start a win-back programme for lapsing high-value customers.
- Capture supplier, carrier, promised and actual dates, and warehouse capacity, then build delay-risk and demand models.

SwiftLog Logistics — Executive KPI Dashboard (orders 1 Jan – 8 Sep 2026)

Confirmed order value	Delivered share of orders	Shipments delayed (≥3 d)	Orders with a return	Orders / customers	Low-stock positions
14.44M	**33.2%**	**63.7%**	**9.5%**	**5,000 / 1,000**	**54**
gross 21.67M	cancelled 32.5% · pending 34.3%	mean delay 3.57 days	500 return records	991 customers ordered	of 2,455 (<20 units)

Reading guide: "confirmed" excludes cancelled orders; "delivered" counts only status = Delivered. Currency units as supplied (not named in the data dictionary).

Data notes: currency units are as supplied; September 2026 is a partial month (to 8 Sep); full methods and all tests are in the Technical Report.
